

Material Decontamination by PBSC

Excellent solutions for biotechnology research

Dedicated to the health of mankind...

Boryung Pharmaceutical has contributed to the progress and development of the pharmaceutical industry, committed to human health, having a strong presence as one of the leading companies in the Korean pharmaceutical market since its foundation in 1963.

Based on its drug development capabilities, expanding its scope of research into a variety of areas to develop drugs for cancer treatments, antibiotics and gene therapy that focuses on cardiovascular and other major diseases, vaccines and other biopharmaceuticals.

PBSC who are the leading manufacturer of clean room, high containment, personnel decontamination and material decontamination products around the world, used their expertise to supply the custom designs needed for this project, situated at the Jincheon site, South Korea.

In association with Woojung Bio who are a reliable partner and supplier into biotechnology research through construction of research institutes, hospitals, universities, pharmaceutical companies and government research institutes. **PBSC** contributed with unique, safe and proven solutions.

Products

- Material Decon H₂O₂ Hatch
- Material Decon H₂O₂ Chamber

Solutions & Results

PBSC provided excellent solutions which had to be flexible to allow Woojung the ability to undertake the customer's requirements which included a bespoke half height decontamination chamber which had to be adapted to allow for no digging restrictions.

The solution being to settle the decontamination chamber on the epoxy, finishing it with a square sus pipe and sus plate instead of a cement treatment.

The decon chamber and hatch both connected to remote generators and were used to prevent contamination of materials into a clean room environment, both were finished with silicon to prevent leakage.

The Jincheon facility manufactures undiluted bacterin vaccine and supplies future-proof and high-quality specialised silicones supporting projects with the research team aiming to help support the growing industry, and with PBSC's contribution and Woojung Bio's construction expertise will help aid in the innovation and transformation Boryung strive for.

Neil Roper - Head of Sales for Material Decon Solutions at PBSC

“ I'm proud to have worked with Woojung delivering decontamination equipment for Boryung's Jincheon facility ”
